DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1 is rejected under 35 U.S.C. 102(b) as being clearly anticipated by Kitagawa, et al. (U.S. 5,433,139). Kitagawa, et al. discloses a bread making machine which may employ a gas sensor to detect the density of carbon dioxide in the oven (col. 6, lines 45-65). The sensor provides an output to a microcomputer, which reads on the instantly claimed monitor. Because the signal passed from the sensor to the microcomputer is indicative of the density of gas, it is at the same time indicative of the cumulative amount of carbon dioxide gas, which is merely the density multiplied by the known volume of the oven. Kitagawa uses the measured gas data to control the progress of the leavening process. This could not be done if the gas measurement was anything but cumulative.

Allowable Subject Matter

Claims 4-8, 12 and 13 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claims 14-18 and 22-26 are allowable over the prior art.
